HUATAO Pre-press Belt Technical Data

Fabric-backed belt for supporting and conveying the mat through compaction before final hot pressing. Confirm the hole pattern against the installed belt and current drawing.

Parameter	Listed value
Model	HT-YY001 / HT-YY002 (confirm perforation against current drawing)
Surface	Matte
Surface material	PUR
Bottom side	Fabric
Color	Black
Structure	3 layer
Thickness	3.8 mm
Min pulley diameter	250 mm
Joint	Z - Splice
Hardness of top side	90 Shore A
Anti-static	Yes
Transversal stability	Yes
Tensile force for 1% elongation per unit of width	70 N/mm
Operating temperature admissible (continuous)	Min-30 °C, Max 80 °C

What to check before ordering

Check whether the installed belt is perforated, then confirm the hole pattern, pulley diameter and Z-splice. Send an existing belt photo or the current drawing with the inquiry.

Confirm perforation before ordering

The catalogue and technical sheet assign the two perforation configurations differently. Confirm the full model and hole pattern against the current drawing before ordering.
